Objective

Results-driven IT professional with experience in database administration, middleware operations (Oracle, WebLogic, JBoss/WildFly) and backend engineering, while actively building DevOps skills including CI/CD, Docker, Kubernetes and automation. Adaptable and motivated to solve problems in a forward-thinking organization and grow in AI and modern cloud-native technologies.

Education

Ahsanullah University of Science & Technology

BSc in Computer Science & Engineering

Dhaka, Bangladesh

Dec 2020 – Nov 2024

- GPA: 3.108 on a scale of 4.0
- **Coursework:** Data Structure & Algorithms, Software Development, OOP, Artificial Intelligence, Machine Learning, Deep Learning, Database, Telecommunication, Cyber-Security, Computer Graphics etc.

Experience

Junior Engineer - Database & Middleware

Express System Limited

Dhaka, Bangladesh

May 2026 – Present

- Installed, configured, and maintained JBoss/WildFly, WebLogic, and Tomcat application servers for Grameenphone systems.
- Managed Oracle WebLogic middleware, including SSL certificate configuration, security policy setup, and role management.
- Performed routine and ad-hoc health checks on application servers to proactively resolve performance or availability issues.
- Deployed applications across Test UAT, and Production environments following Change Management practices at Grameenphone.
- Collaborated with cross-functional teams (Dev, QA, Ops) to resolve performance issues and document configurations.
- Monitored and verified scheduled and on-demand database backups, ensuring recovery readiness.
- Tracked and resolved incidents using the Symphony Summit tool.
- Performed index rebuilding, gathering statistics, and patching Oracle databases to optimize performance for Grameenphone.
- Identified and resolved blocking/locking sessions and long-running queries.
- Handled backup and restoration tasks for Oracle databases.

Executive Business Analyst - Product

US Bangla Airlines

Dhaka, Bangladesh

Oct 2025 – May 2026

- Work with product managers and developers to define user requirements for the booking platform
- Suggest feature improvements (filters, smart recommendations, cancellation policies, loyalty points)
- Track key KPIs (Average booking value, Customer acquisition cost, Cancellation rate, Partner satisfaction score)
- Analyze commission structures and recommend pricing strategies for hotel partners
- Suggest promotional campaigns (flash sales, bundle with flights etc.) to increase bookings
- Find patterns in popular destinations, peak seasons, and high demand hotels
- Map and improve the end to end booking workflow from search to post booking service
- Work with tech and design teams to turn insights into action

Technology Specialist - Network Operation Center

eGeneration PLC

Dhaka, Bangladesh

Jan 2025 – Sep 2025

- Operation, maintenance, and monitoring of real-time critical systems of Grameenphone
- Provide operational support for both the infra and application domains
- L1 administration of Linux and Windows servers for the operation of IT infrastructure and applications
- Participate & coordinate in daily change management activities for smooth system operations
- Involvement with Incident Management, major incident report preparation and RCA (Root Cause Analysis) documentation.
- Resolution and management of GP customer complaints through Single Ticketing System (STS)
- Perform regular Active Directory help desk support for clients and employees
- Leading the client meetings for KT sessions and IT incident calls

Projects

Library Management System

[github.com](#) 

- A Library Management System built with ASP.NET MVC C# streamlines library operations with admin login, book and member management, search, and issue/return tracking for enhanced efficiency and user experience.
- Tools Used: C#, .Net, JavaScript, CSS, html

Mini Account Management System

[github.com](#) 

- A .NET Framework 4.7.2 Web Forms application for managing employee accounts and financial vouchers. Features include role-based authentication, CRUD operations for user accounts, and a dynamic voucher entry system (Journal, Payment, Receipt). Built with SQLite and Bootstrap for responsive UI.
- Tools Used: C#, .Net

DocuChat-AI

[github.com](#) 

- A basic RAG pipeline capable of understanding and responding to both English and Bengali queries. The system can fetch relevant information from a pdf document corpus and generate a meaningful answer grounded in retrieved content.
- Tools Used: Python

Travel Diaries

[github.com](#) 

- "Travel Diaries" is a blog website for exploring spots, sharing experiences, and booking trips, with user registration for advanced features.
- Tools Used: PHP, html, CSS, JavaScript, CoffeeScript

Cafe Management System

[github.com](#) 

- The Cafe Management System, built with JavaFX, MySQL, and NetBeans, streamlines restaurant operations with customer/admin logins, food ordering, account management, bill generation, and feedback reporting for improved efficiency.
- Tools Used: Java, SQL, Swing

Thesis

Predicting Electrical Power Stability in BD Using Machine Learning

[github.com](#) 

- This study applies machine learning to predict electricity grid stability in Bangladesh using a dataset of 20,100 rows. Six models were evaluated to forecast kWh values, aiming to reduce power outages and support strategic decisions for a more resilient and sustainable energy future.

Skills

Programming & Development: Python, PHP, Java, C++, C, JavaScript, SQL, HTML, CSS, .NET

Application Servers & Middleware: Oracle WebLogic, JBoss/WildFly, Apache Tomcat

Monitoring & Observability: Grafana, Dynatrace, Nagios, SolarWinds, Kibana, ManageEngine, OpenShift, EventGrid

DevOps & Infrastructure (actively building): CI/CD, Docker, Kubernetes, infrastructure automation

Incident & Change Management: Symphony Summit, Change Management practices (Test, UAT, Production)
